

How to check system status and container logs

JumpServer is installed as a set of Docker containers performing various functions.

To check the state of the containers, log in to the server where JumpServer is installed and enter the following command:

```
# docker ps -a
```

All containers in the list should have the status **Healthy**

List of Containers

```
jms_panda  
jms_magnus  
jms_celery  
jms_chen  
jms_koko  
jms_lion  
jms_razor  
jms_video  
jms_web  
jms_redis  
jms_kael  
jms_xrdp  
jms_mysql  
jms_core
```

To view the error log of a specific module, use the following command:

```
docker logs -f #CONTAINER_NAME --tail 200
```

For example:

Web interface error log:

```
docker logs -f jms_web --tail 200
```

Error log for Panda:

```
docker logs -f jms_panda --tail 200
```
