

How to check system status and container logs

JumpServer is installed as a set of Docker containers performing various functions.

To check the state of the containers, log in to the server where JumpServer is installed and enter the following command:

```
# docker ps -a
```

All containers in the list should have the status **Healthy**

List of Containers

```
jms_panda
jms_magnus
jms_celery
jms_chen
jms_koko
jms_lion
jms_razor
jms_video
jms_web
jms_redis
jms_kael
jms_xrdp
jms_mysql
jms_core
```

To view the error log of a specific module, use the following command:

```
docker logs -f #CONTAINER_NAME --tail 200
```

For example:

Web interface error log:

```
docker logs -f jms_web --tail 200
```

Error log for Panda:

```
docker logs -f jms_panda --tail 200
```
